TECHNOLOGIES

LANGUAGE: Core Java, Java 8 , C++, C, JavaScript, JSP, HTML

FRAMEWORK: Spring, Hibernate, MVC Architecture, REST

DATABASE: Oracle, MySQL, Server, TOAD

ENVIRONMENT: Agile, Waterfall

TOOLS: Eclipse, Spring Source, Jenkin, SPLUNK, Apache Tomcat, Apache HTTP Server , JIRA, GIT, Postman, Concord,Looper,Lenses Micro-Services, AWS

PROFESSIONAL EXPERIENCE

WALMART - DevOps (contract)

1.2023– 4. 2023 | Sunnyvale

A key contributor for the Ecommerce Team that mitigates, detects, and solves fraud across e-commerce web applications.

- Worked on CCM2 migration from CCM1, Created the Migration Plan, CleanUp unused config and wrote a Script for Validation.
- Worked on Pentest for services annually plan and Certs Update, Obsolete to keep certs up-to-date.
- Send Splunk Alert to Slack and xMatters to get the critical Alert on time.
- Created a Dashboard for result response status of all requestType in kibana.
- Worked in Concord to deploy and deleted the list of flow to make the flow list shorter.
- Participated in the Kafka Migration Process.

INFOSYS - Java Developer

11.2021–11.2022 | Palo Alto

- Actively leveraging internal training tools to advance knowledge of (Python, JavaScript, Java/JEE) and integrating learned technologies in creating prototypes for future projects.
- Developed Spring Boot project to consume API from internally built Rest API to capture data in Json format.
- Deploy Spring Boot to AWS for globally availability and a strong recovery plan.

WALMART - Java Developer (contract)

12.2020– 5. 2021 | Sunnyvale

A key contributor for the Ecommerce Team that mitigates, detects, and solves fraud across e-commerce web applications.

- Developed Common Entity classes from scratch for JPA components using JPA Repository, JEE Components, Spring, Hibernate to store the data in the database.
- Enhance speed of data retrieval from the MySQL database by developing web Application using CRUD operation.
- Actively contributed to and collaborated with the team to provide strategic communication during POC, discovery meetings, to identify project scope, tool selection and feature builds.

RECENT TECHNICAL PROJECTS

Online Pizza Ordering System

TECHSTACK: Java SpringBoot, MySql

Built end to end web application with order management system as a prototype from scratch that enables users to easily create personalized pizzas and allows business to easily process payment.

- Integrated online Stripe payments micro services for a secure, user friendly and quick ordering system and built a database with MySQL to save and organize user data.
- Designed JSP files with Bootstrap for faster design of HTML templates for responsive design across platforms
- Utilize Miro for building out wireframes to facilitate team collaboration and workflow.

Task Management System

TECHSTACK: Java SpringBoot, MySql, JSP

Built a full stack project to create and manage the task within the organization from the scratch. Users can create a task and assign tasks to themselves and others.

- Built using java as the primary language and integrated with Jsp files for responsive design.
- Implemented logic to manage tasks and assignees by featuring full CRUD operations for both tasks and assignees.
- Feature register and login capabilities with user authentication utilizing Bcrypt, front and backend validation.

EDUCATION

CODING DOJO - Full Stack Web Development Coding Bootcamp (2021)

- 16 weeks intensive coding bootcamp focused on Java: 1000+ hrs coding, testing, pair programming, algorithms

INDIRA GANDHI NATIONAL OPEN UNIVERSITY - MS Computer Application (2016) | BS Computer Applications (2010)

Relevant Courses:

- Computer Organization, Cloud and data science, Database Management System, Cloud Computing and IoT, Java Programming Language
- Advance Algorithm & Data Structure Design, C Language Programming, Object Oriented Technologies and Java Programming, Operating System Concepts and Networking Management, Software Development Life Cycle
